

Signal Cartographer

Notice what fits.

Make it yours.

You may be good at noticing a meaningful change, preserving the context around it, and checking what it actually means before acting.

A conditional fit: some counterexamples are present or have not been reviewed. You can choose another supported signature or revise your answers.

Your saved device artwork · reused for printing

The capabilities in your combination

Signal detection

early noticing · fine-grained observation

Often true · self-reported

Context memory

context preservation · situational recall

Often true · self-reported

Perspective checking

mental-model checking · collaborative accuracy

Often true · self-reported

YOUR SIGNATURE MOVE

Write the observation, your first interpretation, and one alternative. Check what happened later.

This name and its combined possibilities are editorial hypotheses. Research context and the observation ledger appear in the Scientific Report. No scan, diagnosis or personal neural alteration was inferred.

GET MORE FROM WHAT YOU NOTICE

Conditions that help you use it.

Time to compare observations with context; permission to ask clarifying questions.

POSSIBLE KRYPTONITE

What to watch for

Too many weak signals can become noise, especially when there is no clear way to verify them.

A proposed trade-off to check, not a difficulty automatically assigned to you.

WHAT YOU ACTUALLY REPORTED

Friction, in your terms

Too much input · Switching cost

Counterexamples can qualify or remove a candidate signature; they never lower your worth or become hidden diagnoses.

Your support kit

Trusted support · Restorative routine · A workable environment

These are reported supports, not calculated amplifiers or buffering percentages.

ONE REAL-WORLD QUEST

Try the move. Keep the counterexamples.

Write the observation, your first interpretation, and one alternative. Check what happened later.

Choose a small, low-stakes situation. Notice what helped, what it cost, and when the description did not fit. Change the story when the evidence changes.

Strengths, difficulty, practice and support can coexist. This report does not claim that harm was necessary or that you owe a positive interpretation of it.
