

FICTIONAL SAMPLE · NOT YOUR RESULTS

A FIELD GUIDE, NOT A FIXED IDENTITY

Superhero Report

Possible strengths.
Real-world friction.
Room to be different.

Systems working together
Generic model · not a scan

“Superpowers” and “kryptonites” are metaphors. Cards below come only from your present-day answers, not presumed brain deformations or a history of adversity.

01 WHAT YOU RECOGNIZE

Your possible superpowers

Often · self-reported

Signal scout

Noticing changes and checking patterns.

Often · self-reported

Idea weaver

Generating and connecting possibilities.

Often · self-reported

Deep diver

Sustained interest-led attention.

02 WHAT CAN BE DEMANDING

Your possible kryptonites

Sometimes · self-reported

Too much input

Competing input can make a situation demanding.

Often · self-reported

Switching cost

Transitions between tasks can take effort.

Up to three of each are shown in fixed questionnaire order, not a ranking. The Scientific Report contains the complete observation record.

03 WHEN PATTERNS MEET

Possible combination powers

A combination may be useful in one setting and demanding in another. These named combinations are ideas to test—not validated traits or measured neural synergies.

UNTESTED COMBINATION HYPOTHESIS

Pattern laboratory

Signal scout (Often) + Idea weaver (Often)

Careful noticing plus idea generation may help you form useful alternative explanations.

Possible kryptonite: A plausible trade-off is making too many connections, including false alarms.

UNTESTED COMBINATION HYPOTHESIS

Focused builder

Deep diver (Often) + System builder (Sometimes)

Interest-led concentration plus clear steps may help turn a complex project into finished work.

Possible kryptonite: A plausible trade-off is investing deeply in one path and finding transitions difficult.

04 PROTECTIVE FACTORS & CURRENT RESOURCES

Your support kit

What helped earlier

- Dependable adult
- Trusted friendship
- Feeling capable

What helps now

- Trusted support · Often
- Restorative routine · Sometimes
- A workable environment · Often

Supports may matter, but this reflection cannot quantify their effect or subtract them from earlier experiences.

ONE SMALL REALITY CHECK

Try it. Notice it. Revise the story.

Notice one detail, then check whether your interpretation was accurate.

Keep track of when the description does **not** fit, too. There is no obligation to turn a painful experience into a positive story.

Your brain's structure, connectivity and activation were not measured. This report cannot say "your brain may be deformed in this way." It can offer possible everyday patterns based on what you actually reported.
